```
#include <CtrlLib/CtrlLib.h>

struct Item
{
  int i;
  int j;
  Item(int _i, int _j) : i(_i), j(_j) {}
};

int main()
{
  Item i0(1, 1), i1(2, 2);
  i0.j = 10;
  i1. //DOSN'T WORK
}
```

When Item has only default constructor and in main() there are no brackets next to defined variables assist shows i1's items.
