captainc wrote on Wed, 17 September 2008 20:18 New product that I saw from a Digg article:  
[http://www.efixusa.net/product\\_info.php?products\\_id=28](http://www.efixusa.net/product_info.php?products_id=28)

Its a usb drive that allows you to install MAC OS on a pc

From their site:

Quote:Run Unmodified Mac OS X on a PC:

Boost your creativity, your dreams and daily tasks in a fully new dimension with Mac OS X on PC. Start to experience what Mac OS X users always enjoyed, stability of Mac OS X system, unique security protection, no viruses, and the beauty of the OS all on your standard PC.

Note sure how it works yet...

Update: Looks like it is limited to the hardware it can run on.

Who cares about "unmodified"

(It is definitely possible and not even that much hard to run OSX on generic PC hardware, even on AMD CPUs. Of course, it is not legal too....)
