Hello everebdoy!

I hope this doesn't look like spamming. But I've already finished the win32 version of AggCtrl, so I'll put it here. It took much less effort than I expected. But please don't ask me how it works, I'm not too sure.

Since last post there's only few changes in the agg24 package and of course the win32 implementation.

I hope that now, when there's much more potential testers (I'm aware of the terrible fact that linux has only about 0,9% among the OS's) somebody will give me any report how it works or at least some criticism.
