Hi,

Good job! I compiled the aggtest on Win32 (XP pro SP3), and it worked very well. The only thing is, the code refused to compile at the first time (on both MSVC9 and MinGW). Reason was, "if with no expression" at aggctrl.h lines 25 and 58:

```
#elif PLATFORM_WIN32
```

but after changing this two line to:

```
#elif defined(PLATFORM_WIN32)
```

code compiled successfully.

Regards.
