forlano wrote on Wed, 24 September 2008 20:35Hello,

I am posting from my new Mandriva linux.

I have removed all tracks of that very ugly Ubuntu and Kubuntu on my computer. Why are those distro so popular?

I finished even to fight with the network module not able to locate an opened wi-fi net.

Even Upp run nicely. I would recommend to have a look at it.

Luigi

Perhaps I spoke too fast. There is an annoying flickering of the display (S3 unichrome pro IGP), the same under kubuntu but at least I can run my wifi. Perhaps KDE is too heavy and I should try something lighter.

Luigi
