Added:
- Reference: XmlDlg (demonstrates how to dynamically create dialog structure)

Modified:
- ArrayCtrl: WhenEnterKey gets invoked when user pushes Enter and IsCursor and no other action (like editing) is invoked. If WhenEnterKey is empty, ArrayCtrl returns false from Key, passing it to the parent.
- CtrlCore: Mouse capture is newly released at the start of ProcessEvent if no mouse button is hold.

Fixed:
- Layout designer: "double" control properties
- Hydra build fixes and improovements
- Assist++ fixes
- TreeCtrl: Repaint bug
- RichTextView: Sometimes it was possible to create many selections
