mrjt didn't write
A template? Is not it a bit brutal?

What about a nice little Color attribute (and perhaps global variables instead of Single)?

Mirek
You are correct, this is horribly over-engineered. I just can't resist a cute idea A Color attribute
would give the extra advantage of being able to use the Chameleon colors.

I think the extra white bits in the cells are probably the margin. Try:
arrayctrl.AddColumn("A Column").Margin(0);
