This was annonced here before, but let me repeat. U++ now has public svn mirror at

http://code.google.com/p/upp-mirror/source/list

which is at most 1 hour behind the "main" repo (means, for all practical reasons, it is as good as fresh).

Mirek

Thanks,

due to my lack of experience with this stuff I have not catched how to get automatically all the modifications and sync my version (still 2008.1). Is there some program that performs it under Windows?

Luigi

You actually do not need to remove 2008.1. Just checkout uppsrc into another directory and create an assembly.
