1. The tabs seems to go down a few pixels more than they should, see the picture below:

Yes, the theme was developed under Windows and some minor look discrepancies are bound to appear. These will be fixed soon as the them matures. Please be patient.

2. The Stream operator% overloading seems to make gcc unhappy. The prototype is: Stream& Stream::operator%(String& s);

I don't normally use GCC, especially because of the way it handles such issues. I once tried to show somebody how to write a very simple boost::format and it worked fine on my compiler, but MINGW failed miserably to compile that. I don't know which of the too compilers is right here. Maybe I can dig up that sample.

But back to the problem: I'll investigate these and try to deliver a version which works on all platforms. But this will have to wait a little, because I'm having problems even building CtrlCOre and CtrlLib with latest SVN under MINGW.
