Hello luzr

GetFileIcon(path, true), but not with GetFileIcon(path, true, true) as it is in the sources.

I thought that a solution would be changing NativePathIcon to something like:
#if defined(PLATFORM_WIN32)
 if (IsDrive(path) && IsSpecialFolder(path))
  return GetFileIcon(path, true, true);
 else
  return GetFileIcon(path, folder);
#endif
where IsSpecialFolder(path) would be true in folders with icons like Desktop but, if I where in
Taiwan, could I get the taiwanese Desktop icon ?

Best regards
Koldo
