First congratulations to all staff involved in UPP development. Ultimate is a very good IDE.

Sorry for that rather silly question but I am new to C++ programming and I did not find how to print PDF files directly from my application source code. I succeeded to save my report (QTF) file as a PDF file but now how to send it to the printer ? Do I have to use an external library as podofu ? I would prefer to use native UPP.

Thanking you in advance
