sergeynikitin wrote on Mon, 20 October 2008 16:18Another small question. How to show in single SqlArray fields from linked tables (as a Join)?

Well, the most straightforward is not to use SqlArray

What you want requires select from multiple tables. SqlArray is designed to support only one table.

Anyway, SqlArray has Join to create master-detail relation of two SqlArrays (or, in fact, you can Join SqlArray to ArrayCtrl too).
