This (very simple) gui app :

```
GUI_APP_MAIN
{

    int pid;
    pid = fork();
    if(pid > 0)
    {
        PromptOK("Process " + AsString(pid));
        return;
    }
    else if (pid == 0)
    {
        PromptOK("Parent Process");
        return;
    }
    else
    {
        PromptOK("ERROR");
        return;
    }

    TestFork().Run();
}
```

Crashes (with memory leak msgbox) instead of forking into 2 processes.
