Actually, I am not sure who implemented sXMLFile and what he was thinking (but I am afraid it was me .

In any case, IMO, there is no need to rename - let us just fix that stupid idea:

```
static String sXMLFile(const char *file)
{
    return file ? String(file) : ConfigFile(GetExeTitle() + ".xml");
/*   if(file)
        return IsFullPath(file) ? String(file) : ConfigFile(file);
    else
        return ConfigFile(GetExeTitle() + ".xml");*/
}
```
