sapiency wrote on Sun, 02 November 2008 05:55Hi,

I use a pointer on a Vector to forward the address.

the assist shows me the methods of the Vectorelements only with

*ptoVector[n].method();

this does not work ...

it ought to be

(*ptoVector)[n].method();

but then the assist does not show me the methods ;-(.

regards

reinhard

A++ is the main development focus now. Please check with latest svn version.

If it still does not work, post the exact version please.

Note that A++ at the moment does not support macro expansions.
