That odd. I've just compiled it against the svn and 2008.1 versions using MSC8 and MingW without any problems. I can see a potential problem on line 766, but it doesn't match the error message. Are you using GCC on linux by any chance? If so which version?

I've changed the offending line but I can't guarantee it'll fix the problem since I can't reproduce it. It's in revision 628.

All updates go into the main trunk, the version you were using was the most recent.

Hope that helps. If you intend on using the Docking package I would love to hear feedback so that I can improve it further, particularly on how easy the API is to use.

James

Thanks. Your change fixed the compilation problem.

Sorry for forgetting to report compiler name and version. That was MSVC9.

I've checked compilation with GCC 4.1.3 on Ubuntu 7.10 + GTK. No problem with compilation. Unfortunately, there is a problem with DockingExample1. Basically, docking is not working with this example. When I'm trying to drag any control (TreeCtrl 2, for example), several other controls just disappear. Sometimes they disappear all, sometimes one or two of them stay visible. That seems to depend on dragging direction.

And that is even more strange because DockingExample2 seems to work correctly.

Another problem. Docking is not working on Vista compiled with MSVC9 + disabled "Show window contents while dragging".
It is not possible to dock a control using mouse.

I've also checked docking on Windows XP + MSVC8 + enabled "Show window contents while dragging". Everything was working fine.

Sorry for making troubles
