kodos wrote on Sat, 22 November 2008 18:54That would be even better, then it would work with function calls in functions, but currently the tooltip is even replaced if I select a variable or an enum, I don't think that is very usefull, and that is probably easier to fix

Actually, it should not, that is strange. Can you post a complete testcase please. I have tested it, it worked well, only starting the tip when the item is function. Perhaps the possible explanation is that parser considers given item to be the function....
