Subject: How to use QTF/RichText with support of links as node of TreeCtrl?
Posted by Novo on Mon, 24 Nov 2008 19:35:11 GMT

What is the best way of using QTF/RichText with support of links as node of TreeCtrl?

seems to be an inefficient way to display QTF because it calls ParseQTF() in GetStdSize(),RatioSize(), and Paint() methods. Direct using of RichText would be a more efficient way.

correct size of a control to pass it to a TreeCtrl::Node.

Any help will be appreciated.

Thanks.
