---

.....

```
void MySelect() { .... }

void Select(Bar& bar)
{
    bar.Add("Select!", THISBACK(MySelect));
}

void MainBar(Bar& bar)
{
    bar.Add("Menu", THISBACK(Menu));
    bar.Add("Select", THISBACK(Select));
}
.....
```

The difference between Bar and MenuBar is that "Bar" can mean ToolBar as well - you can share the same definition for both.

Mirek
