I have added a couple of methods to support "native resolution" printing (in Win32, in Posix printing goes through PDF anyway).

```
bool IsNative() const           { return native; }
```

```
void BeginNative();
```

```
void EndNative();
```

After BeginNative, mapping is 1:1 to printer pixels.

```
Size GetNativeDpi() const;
```

```
int  GetNativeX(int x) const;
```

```
int  GetNativeY(int x) const;
```

```
void Native(int& x, int& y) const;
```

```
void Native(Point& p) const;
```

```
void Native(Size& sz) const;
```

```
void Native(Rect& r) const;
```

These methods convert from dots to native pixels.
