I believe we still might need it to overcome horizontal line artifacts.
And the quality should be now better, as Image is rescaled just once, directly to printer resolution.

Anyway, DrawImage/Data fixed.

Mirek

Doing image rescaling just once in dots mode is a very good reason indeed for your approach, I agree.

What about GetPagePixels and GetPixelsPerInch updates?  Can you throw them in?  I assume nobody currently using them would expect to get different values from them than what the currently active coordinate space uses.

Thanks,

Tom
