Didier wrote on Thu, 04 December 2008 14:48OK thanks,

I compiled and launched successfully the latest svn version on FC8.

I had to modify the build scripts in order to get it running and find out what files were needed for it to run correctly.

The main problems I found with the editor was :

- code completion only worked in main.cpp file of my app ???

- I never found out why ? ( this was on 2007 version )

- when i passed to 2008.1 the same app doesn't compile any more

- I get some obscure syntax error and Thelde freezes !

Maybe I'll try to pass to boost.build style, after viewing some generated makefiles it seems that the dependency problems and includes may just get resolved naturally.

Didier

I have to say I am little bit confused about what was wrong with what version:)

Anyway, code completion, while still not perfect, should be greatly improved in latest svn.

Mirek
