Subject: Export on commandline

This stands out of usual stream of improvements:

There is now commandline support to do 'new' exports, which includes the export of 'relative' makefile.

The interesting about this is that it should make easily possible to prepare 'generic' X11/gtk package.

Examples:

theide uppsrc ide GCC -rsx >GUI ideexport

theide uppsrc ide GCC -rsxM >GUI idemakefiledir
