Subject: Context menu in a embedded class?

Hi,
I have this code:

Class x:
```
tabdlg.dbgrid1.AddColumn("ID");
tabdlg.dbgrid1.AddColumn("Date");
tabdlg.dbgrid1.AddColumn("Value");
tabdlg.dbgrid1.AddColumn("Paid");
tabdlg.dbgrid1.ColumnWidths("0 50 50 200");
tabdlg.dbgrid1.WhenLeftDouble = THISBACK(OnAnuidDBClick);
```

tabdlg is a member of the class x. It is also defined in the .h of the class x like this:

```
class CTablDlg : public WithPaidLayout<TopWindow> {
 typedef CTablDlg CLASSNAME;

public:
 CTablDlg();
};
```

Is it possible to trap the context menu event of this dbgrid as I trap the left dbclick? How?

Thanks

Alex
