May be:

```
int AgeYears(Date date1, Date date2) {  
    int sign=1;  
    if (date1 > date2) sign = -1;  
    int age_years = sign*(date2.year - date1.year);  
    int month_dif = sign*(date2.month - date1.month)  
    if ((month_dif < 0)||((month_dif == 0)&&(sign*(date2.day - date1.day) < 0))) age_years--;  
    return age_years;  
}
```

?
