Hi,

Thanks! Now here's a suggestion: Change code in Core/Convert.cpp as follows:

```
int ConvertTime::Filter(int chr) const
{
    if(IsDigit(chr) || chr == ' ' || chr == '.' || chr == ':')
        return chr;
    if(chr == ',')
        return '!';
    return CharFilterDate(chr);
}
```

Time is not only hh:mm:ss, but also contains date in some format. I assume the filter should therefore accept the current date filter characters too.
