You didn't include "Draw/iml_source.h" header file in "UApplication\MainWorkSpace.cpp". Unified diff for fixed file below:

```
#include "MainWorkSpace.h"

//using namespace UPP;

namespace UA{

#define IMAGECLASS UAImpg
#define IMAGEFILE <UApplication/UApplication.iml>
#include <Draw/iml_source.h>
+
UApplication::UApplication() {
    Sizeable();
    Zoomable();
    CtrlLayout(*this);
    AddFrame(menu);
    Icon(UAImpg::MainIcon());
```

As written in the GUI Tutorial:

Quote:

Note: #include <Draw/iml.h> works only when images are to be used in single .cpp file, otherwise you must put "obsuscated" sequence with #include <Draw/iml_header.h> to you header and #include <Draw/iml_source.h> to any .cpp file.

Sure! thanks...
