ok, that's a replacement for my count-method, but the main-problem is how to use a String (sqlTable) as Sqlld:

```
Sql sql(session);  
Sqlld all("");  
sql * Select(SqlCountRows()).From(sqlTable).Where(PRODUKT=="prohibis");
```

```
H:\Entwicklung\UPP\prohibisZA\prohibisZA.cpp(1049) : error C2668: 'Upp::SqlSelect::From' :  
ambiguous call to overloaded function  
    c:\upp\uppsrc\sql\Sqlexp.h(454): could be 'Upp::SqlSelect &Upp::SqlSelect::From(const  
Upp::SqlVal &'  
    c:\upp\uppsrc\sql\Sqlexp.h(451): or      'Upp::SqlSelect &Upp::SqlSelect::From(Upp::Sqlld)'  
    while trying to match the argument list '(Upp::String)'  
H:\Entwicklung\UPP\prohibisZA\prohibisZA.cpp(1049) : error C2228: left of '.Where' must have  
class/struct/union  
prohibisZA: 1 file(s) built in (0:03.63), 3635 msecs / file, duration = 3697 msecs, parallelization 0%
```

There were errors. (0:04.68)
