The easiest way I can think of, is to do it with a code like this:

```
PromptOK(String("MyProject/src/About$") + GetLanguageCode(GetCurrentLanguage()));  
}{[/code]}The change is that it does not add charset name and returns lower-case language code,  
exactly as TPP editor set language codes for topics.
```

Am I inventing a wheel?

You can use:

LNGAsTxt(SetLNGCharset(GetCurrentLanguage(), CHARSET\_DEFAULT))
