I'm displaying some data within a GridCtrl. Now i want to select a row after pressing a key.

For example i have 4 rows with names:

```
-----col1----col2  
row1 Michael Muller  
row2 Albert Meier  
row3 Hubert Heimer  
row4 Silke Super
```

Now i want to press H and it would be great when row 3 would be selected. How can i realize this?
