Subject: OleDB + parameters = problem

Code:

```
void Test::remove_person(void)
{
   StringBuffer sql;
   Sql stmt(db_session);

   sql << "DELETE FROM person ";
   sql << "WHERE id = ?";

   try
   {
      stmt.SetStatement(sql);
      stmt.SetParam(0, sql_person(0));

 stmt.ExecuteX();
   }
   catch (const SqlExc& e)
   {
      sql_person.CancelRemove();
      Exclamation("[* " + DeQtfLf(e) + "]");
   }
}
```

Problem: Execute(OleDB): "Multiple-step OLE DB operation generated errors. Check each OLE
DB status value, if available. No work was done. (Microsoft JET Database Engine)
SQL error: DELETE FROM person WHERE id = ?"

The same code was working fine when I wasn't using parameters, and was substituting value into
the SQL statement.

Similar approach with parameters works fine with SQLITE database.

Am I missing something?
