Seriously, do you often issue DDL during the application run?

Happens all the time in my unit-tests.

Seriously, such situation is possible when you create a database schema and populate it with initial data.

Everything, what is theoretically possible, will be done by an user.

OTOH, if I ever add automated prepared statement cache with SqlExp, "Invalidate" seems like a good idea, right?

That's right. Actually, cache of prepared statements has sense only in case of using parameters, otherwise there is no reason to reuse statements.
