Hm, now this is interesting. IMO, it should be possible to debug 64-bit apps in 32-bit ide, but it never worked.

If it is possible to get it working, then the most obvious idea is to stay 32-bit with windows ide, right?

That's right. I've even spent 15 minutes trying to debug TheIDE in TheIDE. No luck yet, but the idea seems to be interesting.
