Thanks!

Should not be the handle closed in Close and opened set to false again?

What about this fix:

```
bool Sqlite3Session::Open(const char* filename) {  
    // Only open db once.  
    ASSERT(NULL == db);  
    current_filename = filename;  
    // By default, sqlite3 associates the opened db with "main.*"  
    // However, using the ATTACH sql command, it can connect to more databases.  
    // I don't know how to get the list of attached databases from the API  
    current_dbname = "main";  
    if(SQLITE_OK == sqlite3_open(filename, &db))  
        return true;  
    if(db) {  
        sqlite3_close(db);  
        db = NULL;  
    }  
    return false;  
}
```
