nice example - but how can I make it work?
Could you please post a very simple complete project?

I tried the following code in a console, and a window app, and all versions crash IF the ftp.connect is NOT commented out.

Can anyone post a simple complete project? - thank you.

Here is the code:
(YES - I added the plugin/ftp and web stuff...)

```
#include <plugin/ftp/ftp.h>
#include <plugin/ftp/lib/ftplib.h>
#include <stdio.h>
CONSOLE_APP_MAIN
{
    const Vector<String>& cmdline = CommandLine();
    for(int i = 0; i < cmdline.GetCount(); i++) {
    }
    Vector<String> upload;
    upload.Add("out.txt");
    String strhost="ftp://someftp.com";
    String strftpUser="someuser";
    String strftpPass="somepassword";
    FtpClient ftp;
    if(!ftp.Connect(strhost, strftpUser, strftpPass, true)) {
        printf("Unable to connect ");
        return;
    }
}
```
