unodgs wrote on Wed, 29 March 2006 08:22 This is what I often have to do - put the proper color to code..

```
w.DrawText(... Color(222, 222, 33));
```

if on toolbar there could be a small button to invoke color window that would be great.. And if there could be ability to choose the inserted color format...

```
Color(r, g, b)
```

```
r, g, b
```

```
#xxXXxx
```

Well, it is very specific request, but I must say it happens to me as well... So far I have just invoked .iml to choose the color, then copied result.

I think there should be submenu in Assist menu with similar functions...
