kodos wrote on Sat, 21 February 2009 14:27Hi,

I think the text looks quite a bit better with subpixel rendering, but it seems as if the vertical lines of the bottom table are "colored" in the subpixel picture. That doesn't look so good. I don't know if this is an error in your implementation or a side effect of the used algorithm.

Well, that IMO is unavoidable. I believe they look OK if seen from distance - the computed colors should blend into gray.

IMO, you are going to see such artifacts in any subpixel rendering system. It is just that the text usually is not thin vertical line....

OTOH, it is still possible I have error somewhere
