luzr wrote on Wed, 29 March 2006 20:22I must be stupid, but I unable to grasp what you have on the mind here...

Mirek

A possibility to have 2 or more e.g "ide.colors", "ide1.colors" or in hl_color.i some separate sections to generate from and then an option to switch between saved settings. Like Default, Mirek's
favourite, Daniel's, forNamespaces etc...
 Now I'm switching block Level 1 color to white when open files with namespaces and then some other color for files without namespaces...
Is this more clear now?
