Hello,

Yes assist++ can be ameliorated. But in my opinion, code editing defect are not blocking problems like other issues are.
From my side the three points to improve int theide are (in order of priority)

1. Better debugger integration with both GCC and MSC. Visual studio watches can be considered as a reference.

2. More flexibility with package organizer and building process to allow complex configuration (executable using a package build as a dll, ...)

3. Visual assist style code completion
