Hi,

I compiled the ide using 2008.1beta...

I used uppsrc/ide package to compile.

I used mingw debug version.

I placed the executable in the upp directory.

However, when I run it, it does not run as the original exe.

When press f5 to run a project which I already ran in the original exe, I get an error invoking gdb..
assertion failed at uppsrc/core/other.h line 17...

Thanks.
