Hello,

I'm doing a competition results management soft for my favourite sport (spear fishing) and I encounter problems when trying to chain several panels in order to dynamically add/modify things.

the error is encountered is the following:

SQL Error : "cannot commit transaction - SQL statements in
progress"

Error statement: "COMMIT;"

I made an example project where the problem happens.
To reproduce the problem do the following:
Start soft
--> push [COMPETITER]
--> push [MODIFY CLUBS]
--> modify a club city name
--> Return
===> Error msg appears

I'm new to SQL programming, so my error is probably due to low level knowledge, but what I want to do is simple and I know it is possible so where is my error ???

Thanks
