Hello all

I have uploaded to bazaar the code and demo to test a function to open and show with Painter static .svg files (Scalable Vector Graphics):

```
void ParseSVG(Painter& p, const char *svg);
```

This is an initial version and it is open to contributions by improving it or by testing it with .svg files.

I have included the next files and folders:

- PainterSvg
  - ParseSvg.cpp: The code
- PainterSvg demo
  - SvgDemo.cpp: The demo (compatible with Painter demo)
  - Examples.h: Rest of files have been taken from Painter demo
  - Examples.lay
  - init
  - main.cpp
  - PainterSvg demo.upp

To open the .svg file copy it in C:\demo.svg or change String file in SvgDemo.cpp.

Before using it please download the last Upp svn.

It has been tested with GCC in Ubuntu/Linux and MinGW/MSVC9 in XP.

Here I enclose you a screenshot.

Best regards

Koldo
