Hello all,

I do a little test today. I tried to link upp libraries generated with TheIDE (MSC9 optimal) with visual studio 2008.

For example i created a new projet with no sources, only binaries needed by UWord example

- UWord.obj
- bmp.lib
- Core.lib
- Draw.lib

- ..

Look a the resulting uword application (screenshot in attachment)

Is there a tip for invoking microsoft link.exe to correctly link upp based applications?

Thanks for your help
