Here are the patch files.

I tested under XP and Vista, and also did a branch of an app and replaced all ToolButtons with ButtonOptions so I think it is OK now.

One thing that I would like to change is the way the control behaves as if in state CTRL_HOT when parent control automatically focuses it or when navigating with tab key. I don't know how to achieve this. It doesn't have to be part of the control, but it would really help me.
