when to use struct, when - class, for a derived from e.g TopWindow?

e.g

```
class SimpleWindow : public TopWindow {  
public:  
    typedef SimpleWindow CLASSNAME;  
  
    SimpleWindow();  
};
```

```
struct SimpleWindow : public TopWindow {  
public:  
    typedef SimpleWindow CLASSNAME;  
  
    SimpleWindow();  
};
```
