I tried in every way to set the position of a ControlOkCancelLayout, but every time the window is opening at the center of the application.

SetPos, SetFramePos, SetRect, SetFrameRect... I don't know how to move that window!

The only difference is when i do a noCenter on the new layout, and it's opening in Top and left part of the monitor, but I can't be able to move it.

Thanks to everyone
