Thanks,

m\_session.SetTrace() is in this function

```
bool prueba_Postgres::OpenDB()
{
    if(!m_session.Open("host=localhost dbname=radioactivo user=postgres password=test"))
    {
        Exclamation(Format("Error in open: %s", DeQtf(m_session.GetLastError())));
        return false;
    }

    m_array.SetSession(m_session);

#ifndef _DEBUG
    m_session.SetTrace();
#endif

//schema
Progress p;
p.SetText(t_("Creating _DEBUG database"));
SqlSchema sch(PGSQL);
StdStatementExecutor se(m_session);
All_Tables(sch);

if(sch.ScriptChanged(SqlSchema::UPGRADE))
    PostgreSQLPerformScript(sch.Upgrade(),se, p);
if(sch.ScriptChanged(SqlSchema::ATTRIBUTES))
{
    PostgreSQLPerformScript(sch.Attributes(),se, p);
}
if(sch.ScriptChanged(SqlSchema::CONFIG))
{
    PostgreSQLPerformScript(sch.ConfigDrop(),se, p);
    PostgreSQLPerformScript(sch.Config(),se, p);
}

sch.SaveNormal();

return true;
}
```

---

I tryed with the #ifdef \_DEBUG and #endif lines commented and I also tryed compiling it in Release mode, but still the info is not saved
