Thanks,

m_session.SetTrace() is in this function

```
bool prueba_Postgres::OpenDB()
{
    if(!m_session.Open("host=localhost dbname=radioactivo user=postgres password=test"))
    {
        Exclamation(Format("Error in open: %s", DeQtf(m_session.GetLastError())));
        return false;
    }

    m_array.SetSession(m_session);

#ifdef _DEBUG
    m_session.SetTrace();
#endif

    //schema
    Progress p;
    p.SetText(t_("Creating _DEBUG database"));
    SqlSchema sch(PGSQL);
    StdStatementExecutor se(m_session);
    All_Tables(sch);

    if(sch.ScriptChanged(SqlSchema::UPGRADE))
        PostgreSQLPerformScript(sch.Upgrade(),se, p);
    if(sch.ScriptChanged(SqlSchema::ATTRIBUTES))
    {
        PostgreSQLPerformScript(sch.Attributes(),se, p);
    }
    if(sch.ScriptChanged(SqlSchema::CONFIG))
    {
        PostgreSQLPerformScript(sch.ConfigDrop(),se, p);
        PostgreSQLPerformScript(sch.Config(),se, p);
    }

    sch.SaveNormal();

    return true;
}
```

I tried with the #ifdef _DEBUG and #endif lines commented and I also tried compiling it in Release mode, but still the info is not saved
