Hello gridem

Here I enclose you the package.

Now the calling function is `QtRichObject QtfEquation(String str)` so that to get it into Qtf is as simple as `GUI_APP_MAIN`

```
{  
String qtfText;  
  
QtRichObject qtEq = QtfEquation("integral(sqrt(cos(phi_ini^2)) + i^2 + 6, i = 1, 10)*dx =  
cos((27+x^2)^3.25)/(PI*R_0^2)");  
  
qtfText << "[R3 This is a formula in QTF:&" << qtEq;  
  
PromptOK(qtfText);  
}
```

ToDo list:

- Improve appearance mainly in Linux
- Change font size
- (Perhaps) Improve expression parser

Best regards
Koldo
