koldo wrote on Tue, 07 April 2009 11:41Hello all

I would like to ask you to add in the comparisons web page a comparison with Visual C++.

I do not know MFC or .NET classes so if somebody has some significant sample like the ones that are in the page (QT, Java, wxWidgets), I would try to do the U++ sample (if other person prefer to do it, no problem!)

I have seen many people that has heard about Qt, etc. but they have really used only Visual C++ in Windows, so a comparison focused to them would be good to show them the U++ advantages.

For example I would show the comparison to people in my company. Perhaps they are simply wasting time and money for not using U++...

Best regards
Koldo

Well, all we need is some nice example in MFC and/or C# that we can reimplement...
